GRADUATE HANDBOOK

Master of Science Degree in Biomedical Engineering

(MS BME)

Fall, 2021
Amendments

1. First version was approved by the BME faculty on November 5th, 2010
2. Amended by the BME faculty on October 3rd, 2011
   a. Guidelines for selection of approvable electives, page 8
   b. Expectations for regular attendance of BME Department seminars, page 9. BME graduate students are expected to attend the BME Department seminar series.
3. Amended by the BME faculty on May 4th, 2012
   a. Capstone requirements for Non-Thesis Master of Science students, page 8, added
4. Amended by the BME faculty on November 3rd, 2014
   a. Guidelines of selection of elective courses for Plan of Study, pages 8-9
5. Amended by the BME faculty on May 7th, 2015
   a. Course requirements for Thesis Master of Science students, page 8. The Thesis option minimum credit hours requirement for BME Graduate courses was reduced from 12 credit hours to at least 6 credit hours. If less than 12 credit hours are used the balance of the 12 credit hours must be from graduate level engineering courses.
   b. Increase in the minimum TOEFL score requirements for admission. Increase the iBT Writing, Speaking, Listening, and Reading requirements as follows: W:18 → 20, S:18 →20, L:14→20, R:19→20, for a total of 79→80. The requested changes are based on the analysis of the iBT TOEFL scores of current and past students found to be lacking in sufficient English skills, and to be consistent with the Paper Test percentile score of 550.
   c. Credit, grade and index requirements for graduation, page 7. The Primary course minimum grade requirement was increased. Students will be expected to maintain a B- or better in each course listed as “Primary” on their Plan of Study. If students receive a course less than “B-“ in a course listed as Primary, they are required to retake the course.
6. Amended by the BME faculty on August 17, 2016
   a. Guidelines for BME69700 included.
   b. Guidelines for BME 69600 included.
7. Amended by the BME faculty on September 11, 2017
   a. Revised procedure for course petition submission.
   b. Updated text on English requirement for international students.
   c. Removed BME 501/502 course requirement, and replaced with advising consultation.
   d. Added clarification on whether BME 696 and/or 697 can be counted as Primary courses.
   e. BME 50000 BME Grad Seminar requirement, a zero-credit hour graduate course
8. Amended by the BME faculty on August 21, 2019
   a. Added courses to the approved list of “Mathematics, Statistics, or Life Science elective courses” in Section 11.
   b. Clarified that transfer courses cannot be used as Primary.
9. Amended by the BME faculty on May 1, 2020
   a. Added text to specify Graduate Advisory Committee members.
   b. Revised Section 9 PLAN OF STUDY to reflect new procedure to file Plan of Study online.
   c. Clarified math requirement for 5-Year BS/MS students regarding STAT 511 and 519.
   d. Section 11 COURSE REQUIREMENT: specify that internship or work experiences may be used for graduate elective credit hours for BME 69600.
   e. Section 12 ACADEMIC STANDING: clarify the reasons for a student to lose Good Academic Standing and the consequences.
   f. Section 15 PREPARING THESIS AND FINAL EXAMINATION: updated the process
   g. Added Appendix C. Sample Plans of Study (GS-6): Non-Thesis and Thesis
10. Amended by the BME faculty on December 7, 2020
   a. Non-Thesis students: Director of the Graduate Program will serve as Faculty Advisor. No Advisory Committee needed.
   b. BME 696 or 697 no longer required, just recommended for Non-Thesis Master’s students.
   c. Added note about Engineering electives: most, but not all are automatically approved.
11, Amended by the BME faculty on August 16, 2021
   a. Added BIOL 564 to the approved list of “Mathematics, Statistics, or Life Science elective courses” in Section 11
   b. Combined information on “Transfer Credits” in Section 11.

1. **INTRODUCTION**

This handbook addresses common questions from applicants and current graduate students concerning the Master's program of study in Biomedical Engineering at IUPUI. Information is provided concerning the application process, establishing a program of study, required scholastic performance and general administrative expectations of the IUPUI Graduate School and the Department of Biomedical Engineering.

2. **BIOMEDICAL ENGINEERING FACULTY**

As of Fall, 2020, the core biomedical engineering faculty at IUPUI are:

- **Karen Alfrey**, Ph.D. Rice University, 2000. Computational biology, neuronal modeling; biological control systems
- **Edward Berbari**, Ph.D. University of Iowa, 1980. Computer-based medical instrumentation, biomedical signal processing, cardiac electrophysiology and biophysical modeling
- **Steven Higbee**, Ph.D. Rice University, 2013. Biomaterials and tissue engineering, undergraduate research
- **Chien-Chi Lin**, Ph.D. Clemson University, 2007. Development of functional hydrogels for tissue regeneration and controlled release applications
- **Kayla Maxey**, Ph.D. Purdue University, 2020. Engineering Education
- **Sharon Miller**, Ph.D. University of Michigan, 2008. Biomaterials and tissue engineering
- **Sungsoo Na**, Ph.D. Texas A&M University, 2006. Cellular/molecular mechanics and mechanotransduction of skeletal and vascular systems
- **John Schild**, Ph.D. Rice University, 1995. Electrophysiological and computational study of neurocirculatory control
- **Joseph Wallace**, Ph.D. University of Michigan, 2007. Biological and environmental factors influencing the organization and assembly of bone
- **Dong Xie**, Ph.D. Ohio State University, 1998. Polymer biomaterials
- **Ken Yoshida**, Ph.D. University of Utah, 1994. Neural engineering, bioinstrumentation

3. **GRADUATE SCHOOL ADMISSION REQUIREMENTS**

Students are required to take the Quantitative, Analytical Writing and Verbal GRE exams. Successful applicants typically have scores above the 60th percentile and a minimum undergraduate Biomedical Engineering GPA of 3.0/4.0 from an ABET accredited institution. Applicants with an undergraduate degree in Biomedical Engineering from an educational institution outside of the US are required to take the TOEFL exam. The minimum TOEFL scores required before an application will be considered are the following:

- **Internet-based test (iBT)**: The following five (5) minimum scores must be met: Writing: 20, Speaking: 20, Listening: 20 and Reading: 20; and Total score: 80.
- **Paper-based test**: the minimum acceptable score is: 550.
The British Council’s International English Language Testing System (IELTS) is acceptable in lieu of the TOEFL. A minimum overall IELTS band score of 6.5 is required for admission.

4. APPLICATIONS FROM NON-BIOMEDICAL ENGINEERING MAJORS

Preliminary coursework may be required before admission into the program if, in the opinion of the Biomedical Engineering Graduate Education Committee (GEC), an applicant appears capable of graduate level work but would benefit from additional study in select academic areas. The following course listings should be used as a guide for self-assessment. The GEC most often will identify needs for additional study in these areas.

Mathematics and Physics Requirements

Graduates of an ABET accredited program other than Biomedical Engineering or graduates from a non-ABET accredited program must provide evidence of proficiency in the following academic areas (IUPUI course equivalents listed):

- MATH 16500 Analytic Geometry and Calculus I
- MATH 16600 Analytic Geometry and Calculus II
- MATH 17100 Multidimensional Mathematics
- MATH 26100 Multivariate Calculus
- MATH 26600 Ordinary Differential Equations
- PHYS 15200 Mechanics
- PHYS 25100 Heat Electricity Optics

Engineering and Life Science Requirements

Graduates from a discipline other than Biomedical Engineering will need to demonstrate some depth of academic proficiency consistent with the anticipated area of study (e.g., bioelectricity, biomechanics, biomaterials, biofluids, etc.). At a minimum, the academic areas most often cited by the Committee include (IUPUI course equivalents listed):

- BME 32200 Probability and Application in BME
- BME 33100 Biosignals and Systems
- BIOL K324 Cell Biology

The extent to which additional study is required to prepare the applicant for graduate level work in Biomedical Engineering is greatly dependent upon the nature of the undergraduate degree (e.g., B.S. vs. B.A., engineering vs. non-engineering, biology vs. chemistry, etc.) Those areas most often cited by the Committee include (IUPUI course equivalents listed):

- BME 22200 Biomeasurements
- BME 24100 Introduction to Biomechanics
- BME 33400 Biomedical Computing
- BME 38100 Implantable Materials
- BME 35200 Cell and Tissue Behavior and Properties
Summary

Applicants with an undergraduate engineering degree in a discipline other than Biomedical Engineering who can show evidence of proficiency in these Mathematics, Physics, Engineering and Life Science requirements are given full consideration for admission by the Committee. Applicants with a non-engineering undergraduate degree must show quantitative evidence of proficiency in these areas (for example, obtaining at least a grade of "B" in any course recommended by the Committee). Demonstrated proficiency with at least one high level computer programming language or a command interpreter such as MATLAB is also required.

Once admitted, students with a non-BME undergraduate background are required to meet with their advisor at the start of the program, to discuss if additional courses are needed to prepare them for the BME program. In consultation with an advisor and other faculty in area of interest, students may be asked to take fundamental courses in BME. These classes would not count toward the credit requirements for the Master’s Degree in Biomedical Engineering.

5. ADVANCE REGISTRATION AND FINAL REGISTRATION

Each semester a graduate student can pre-register for courses offered in the following semester during the advance registration period of the current semester. Students already in residence are strongly urged to advance register. New students may advance register if they come to campus during the semester before starting graduate work.

If advance registration is not possible, students should register during the final registration period. Final registration follows the same procedure as advance registration and is held during the week preceding the beginning of classes.

6. LATE REGISTRATION

Any student who has not utilized the advance or final registration periods must schedule under late registration which begins the first day of classes and continues for one week. Penalty fees will apply and the student should consult the Bursar's Office.

Dropping/Adding Courses

Each graduate student is expected to be aware of all procedures, late fees, refund deadlines, etc. associated with dropping/adding of courses. Students may drop/add courses online during the open registration period. However, once the open registration period ends, students must use a Drop/Add form to change a course. Information on procedures and deadlines are available on the IUPUI Registrar's website.

7. ENGLISH LANGUAGE REQUIREMENTS FOR INTERNATIONAL STUDENTS

A student whose first language is not English must take the English for Academic Purposes (EAP) Placement Test. You are exempt from taking the EAP exam if you scored at least: 100+ on TOEFL or 7.5+ on IELTS. Those students with noted deficiencies based on EAP scores are required to take one or more EAP courses or equivalent, for example TCM
Language related courses cannot count towards the credit requirements for the Master's Degree in Biomedical Engineering.

8. FACULTY ADVISOR AND ADVISORY COMMITTEE

Graduate students in both Thesis and Non-Thesis Programs of study are expected to have a Faculty Advisor by no later than the end of the first semester of study.

For Thesis students employed as a full time Graduate Research Assistant, the Faculty Advisor is the faculty member sponsoring the Master of Science Thesis research project. The Faculty Advisor and student must establish a Graduate Advisory Committee. It is the responsibility of this committee to assist the student in finalizing a formal Plan of Study for fulfillment of the Master of Science degree requirements. This Advisory Committee conducts all necessary examinations related to the Master of Science Thesis research for Thesis students. The Graduate Advisory Committee generally consists of three members: Faculty Advisor (BME faculty), a professor knowledgeable of the major field of study, and a professor representing a related area of research. In case the Faculty Advisor for a thesis project is not a primary BME faculty, then a BME faculty must serve on the Committee as co-Chair and faculty of record.

For Non-Thesis students, the BME Director of the Graduate Program will serve as their Faculty Advisor, and Graduate Advisory Committee is not needed. The Faculty Advisor will review student’s performance and conduct all course requirements for Non-Thesis students.

9. PLAN OF STUDY

In the first semester of the program, all graduate students should consult with their Faculty Advisors first to finalize courses to be put on the Plan of Study and choose members of the Advisory Committee. Students should contact members of their Advisory Committee to confirm their participation.

Filing of the Plan of Study Form (GS-6) is now done online via the Purdue Graduate School Portal website. Near the end of the first semester, students will receive an email from the Purdue Graduate Recorder with instructions to set up a Purdue Career Account (PCA). Once complete, students can log in and follow directions online to complete the Plan of Study and submit Advisory Committee members. All relevant signatures will be obtained electronically. The completed form is then recorded in the student’s academic file. Approval by the Director of the Graduate Program and the Graduate School officially establishes both the Plan of Study and the Advisory Committee.

The BME Graduate Program Coordinator can assist with the logistics of filing a Plan of Study. The Appendix at the end of this document includes helpful hints for filing Plan of Study (GS-6) as well as sample Plans of Study for Thesis and a Non-Thesis degree programs. Each student is expected to file the Plan of Study Form (GS-6) no later than 4 – 6 weeks into the second semester of graduate program. Students failing to meet this requirement will loss Good Academic Standing, and will not be permitted to register for additional courses or thesis project credits.
Change to the Plan of Study

To make changes to an approved Plan of Study, the Request for Change to the Plan of Study Form (GS-13) must be electronically submitted through the PCA. This form is also used to: request a change of Faculty Advisor, major professor or other members of the Advisory Committee, and for a change between Thesis and Non-Thesis Master of Science degree options.

10. CREDIT, GRADE, AND INDEX REQUIREMENTS FOR GRADUATION

In order to graduate with a Master of Science from Biomedical Engineering, it is required to have completed 30 graduate level credit hours. Only grades of C- or higher are acceptable in fulfilling the academic expectations set forth in the Plan of Study, and the Advisory Committee requires a grade of "B" or better in certain courses. Grades of "Pass/Fail" are not acceptable for any course listed on the student's Plan of Study. Grades of "Incomplete" must be cleared by the twelfth week of the semester immediately following the semester in which the grade of Incomplete was awarded. Failure to do so may result in replacement with a grade of "F" and dismissal from the program. All students in the Master of Science degree programs are required to take at least four (4) “Primary” courses for the approved Plan of Study and maintain a grade of “B-” or better for the “Primary” courses. The “Primary” courses with a grade lower than “B-” must be retaken for fulfilling the Plan of Study requirements. Students in both the Thesis and Non-Thesis Master of Science degree programs must have a cumulative grade point average of at least 3.0 for all courses listed on the approved Plan of Study to be eligible for graduation with a Master of Science degree in Biomedical Engineering.

11. COURSE REQUIREMENTS

Research interests of the faculty as well as the course offerings of the BME department can be generally categorized into three areas of concentration:

- Biomaterials / Tissue Engineering
- Biomechanics / Mechanobiology
- Bioinstrumentation/Neural Engineering/Biosignal Processing

The 30 credit hours required for graduation must be distributed according to the following subject areas:

Plan of Study with a Thesis option:

3 credit hours  Approved graduate Mathematics or Statistics courses
6 - 12 credit hours Graduate Biomedical Engineering courses*
0 - 6 credit hours Graduate Engineering courses*
6 credit hours  Approved graduate life science or engineering elective courses
9 credit hours  Thesis research

* At least 6 credit hours of Graduate Biomedical Engineering courses must be included in the Plan of Study. If less than 12 credit hours of Graduate Biomedical Engineering courses are included, the balance of the 12 credit hours must be Graduate Engineering courses. These 12 credit hours should comprise the four (4) required Primary (P) courses of the Plan of Study.
Plan of Study with a Non-Thesis option:

3 credit hours  Approved Graduate Mathematics or Statistics courses
12 credit hours  Graduate Biomedical Engineering courses
0 - 6 credit hours  Approved Graduate Life Science or Engineering elective courses
9 - 15 credit hours  Approved Graduate Engineering electives

BME 696/697 Option

Non-Thesis students have the option of completing 3 credit hours devoted to a single capstone project, in BME 69600 Advanced Biomedical Engineering Projects, sponsored by a faculty member. Alternatively, graduate students pursuing a course only (no project) Non-Thesis Plan of Study may take 69700 Directed Reading in BME.

In some instances, a faculty sponsor may use BME 697 as an opportunity to impart to students the background information needed for a BME 696 project. Those students will take BME 697 prior to 696. Only one, either BME 696 or 697, can be counted as a Primary on a student’s Plan of Study. If a student has taken both, BME 696 will count as Primary, and BME 697 will count as either a science or engineering elective.

Prior approval from the Faculty Advisor is required to take either course. If either BME 697 or 696 is sponsored by a faculty outside of the BME Department, a faculty of record within BME will be chosen by the Director of the Graduate Program.

BME 69600 or BME 69700 are highly recommended, but not required for all Non-Thesis Master’s students. See Appendix A for detailed guidelines for BME 697 and 696.

Guidelines of Selection of Elective Courses for Plan of Study

BME offers its graduate students considerable flexibility in selecting life science and discipline specific electives. There is, however, an implied expectation that course selections will follow a unified theme in BME that is consistent with the student's research thesis, capstone project, or academic Plan of Study. The BME Graduate Committee has reviewed and approved the following courses for inclusion on a Plan of Study for the Master of Science Degree in Biomedical Engineering. However, approval of the Faculty Advisor and Advisory Committee is needed for courses to apply toward the student’s Plan of Study.

• Engineering elective courses

In general, IUPUI graduate courses at the 500 level and above offered by the ECE and ME departments are acceptable as approved engineering elective courses. However, depending on the course content, some may not be approved as engineering electives. Please consult with your Faculty Advisor.

• Mathematics, Statistics, or Life Science elective courses

The BME Graduate Committee has reviewed and approved the following courses for inclusion in a Plan of Study for the Master of Science Degree in Biomedical Engineering.

</table>

* STAT 511 and 519 cannot be used by 5-Year BS/MS degree students on their Plans of Study.

Courses on this list do not require prior approval and can be considered as acceptable for a Plan of Study. This assumes the selection adheres to the credit allocations for the Thesis and Non-Thesis degree options and is thematically consistent with the Master of Science student’s research thesis or capstone project. Furthermore, all graduate courses at the 500 level and above offered by the School of Science and the IU School of Medicine are potential selections for an approved Plan of Study. There may also be suitable graduate offerings in the Schools of Dentistry, Health, Nursing, etc., but, to date, not many have landed on an approved Plan of Study.

Before selecting any course outside of the BME department and NOT on the list of approved courses, students must first review the selection(s) with their major professor and then petition the BME Graduate Committee by notifying the Chair of the committee via email and filling out a Course Request Petition Form. For new courses, the student must submit a course syllabus and an outline of lecture topics (if available), along with the form, to the BME Graduate Program Coordinator. The Committee will then determine if the
course has a sufficient life science focus and rigor to be added to an approved Plan of Study for the Master of Science Degree in BME.

**Transfer Credits**

It is a rule for all Master of Science degree programs in the Purdue system that no more than 12 graduate credit hours can be transferred onto a Plan of Study from an outside institution or some other IUPUI graduate degree program. Transfer courses are not included in the computation of the cumulative grade point index. As a result transfer courses cannot be used as Primary, but only as related electives.

**Guidelines: Miscellanea**

For the math course requirement there is considerable flexibility in terms of acceptable courses. For a math course to be approved, careful consideration is given to the level of analytical rigor in the course material and thematic consistency with the topic of the Master student's research thesis, project, or area of concentration.

Non-Thesis part time students who work in a BME related field or students who engage in BME related internships may receive graduate academic credit through enrollment in BME 69600 Advanced Biomedical Engineering Projects. The project and expectation for deliverables must be approved by the BME Graduate Committee. Approval must occur before the start of the semester of enrollment in BME 69600. The Director of the Graduate Program or a BME faculty member with related interests will serve as the instructor of record.

Deviations from these course requirements must be approved in advance by the BME Graduate Education Committee and the Chair of the BME Department.

**12. ACADEMIC STANDING**

**Good Academic Standing**

All graduate students begin their program of study in Good Academic Standing. In order for graduate students to remain in Good Academic Standing, they must maintain minimum standards of academic performance that are set by the Biomedical Engineering Department. These expectations are in addition to the minimum standards of performance and personal behavior set forth by the IUPUI Graduate School.

To stay in Good Academic Standing, a Master of Science graduate student must maintain a semester grade point average of at least 3.00 (4.00 scale) at the end of each semester of study. A graduate student with a semester GPA below 3.00 at the end of any semester is automatically placed on an Academic Checklist, and is issued a Warning Letter. Registration is then restricted, and students are required to meet with their Faculty Advisor in order to lift the registration hold before registering for classes next semester. Should a student's cumulative GPA remain below 3.00 at the end of the semester immediately after losing Good Academic Standing (meaning the student has lost Good Academic Standing for two consecutive semester), the student will be placed on Academic Probation.
The BME Department sponsors many opportunities for academic, scientific research, and professional career enrichment. The BME faculty strongly encourage our graduate students to make the most of these opportunities to ensure their training experience is grounded in a broader understanding of the Biomedical Engineering field and its role in advancing medical science. While these activities are voluntary for students, there is one exception: Master of Science BME graduate students are required to attend BME Departmental Seminars. **Students must register for BME 50000 BME Grad Seminar, a zero-credit hour course, every semester, and attend all scheduled talks.** This includes departmental seminars and Graduate Student Association meetings. Failure to register for BME 500 each semester will also result in loss of Good Academic Standing.

In addition to the two scenarios above, other reasons that could result in a student’s loss of Good Academic Standing include:

- Any incidences of Academic Misconduct
- Failure to submit their Plan of Study in time (by second semester of the program)
- Failure to rectify any Incomplete grades promptly in the Master’s program

Students who lose Good Academic Standing for two semesters, consecutive or not, will be placed on Academic Probation. A student on Academic Probation will not be permitted to register for further graduate courses until an academic review has been carried out by the Biomedical Engineering Graduate Education Committee. The outcome of this review may be either dismissal from the Master of Science degree program, or a list of expectations the student must achieve in the next semester (for example, minimum academic performance in specific graduate courses).

Without exception, the Master of Science Degree in Biomedical Engineering will not be awarded to a graduate student with a cumulative grade point index below 3.00 (4.00 scale). The cumulative grade point index is calculated using the courses that are listed on the approved Plan of Study. If a course is taken more than once while the student is enrolled as a graduate student, only **the most recent grade received** in the course will be used in computing the grade point index. Any course on the Plan of Study that carries a grade of “D” or “F” must be repeated.

13. **CHANGES IN ACADEMIC PROGRAM**

As a student progresses through their course work and research, there may arise conditions that make it necessary to make changes to their approved Plan of Study and/or changes to their research objectives. Such changes, when based on appropriate academic reasons, are generally acceptable, and the required form GS-13, *Request for Change to the Plan of Study*, must be completed and filed with the Graduate School (see Section 9, above). However, the following rules must be observed:

- A course **cannot** be removed from an approved Plan of Study once the course has been taken and a grade of “D” or lower has been received. This course must be repeated, and the student must receive at least of grade of "C" before the course can be removed from an approved Plan of Study. This rule is mandated by the Purdue Graduate School.
• Any change to a Plan of Study and subsequent filing of form GS-13 requires approval of the student’s Graduate Research Advisory Committee, Director of the Graduate Program, and the Chair of the Biomedical Engineering Department.

14. INACTIVE ACADEMIC STATUS

Students who do not enroll in classes for three (3) consecutive academic sessions, including summer sessions, will be automatically assigned an Inactive Academic Status and are no longer considered to be in Good Academic Standing by the Biomedical Engineering Graduate Education Committee. While under an Inactive Academic Status, no progress can be made toward completion of the Master of Science degree requirements. In order to be removed from an Inactive Academic Status and returned to an Active Academic Status, the student must complete a new application with the Graduate School requesting re-admission. While all other supporting application materials (GRE, transcripts, etc.) are *not required* for re-admission to the Graduate School, these and other materials may be required for re-admission into the Biomedical Engineering Department and return to Good Academic Standing in the Master of Science degree program. Students should consult with the BME Graduate Education Committee to clarify and confirm Committee expectations in order to return to Good Academic Standing in the Master of Science degree program.

Students must wait for their applications for re-admission to be officially approved by the Purdue University Graduate School before enrolling for classes. Registration activities that take place while under Inactive Academic Status and before a new application for re-admission has been officially approved by the Graduate School are considered invalid and will not count toward graduate credit.

15. PREPARING THESIS AND FINAL EXAMINATION

• All students preparing a Thesis document and a final oral examination *must attend* a Thesis/Defense Preparation Briefing. These sessions are regularly offered by the Office of Graduate Programs in the School of Engineering and Technology with dates, times, and locations reposted each semester. Each Master of Science student is expected to complete this briefing prior to composing the first draft of the Thesis. Generally, the student and major professor begin working through drafts of the Thesis at least 2-3 months before the anticipated date of the Final Oral Examination. Therefore, it would be prudent to complete a Thesis/Defense Preparation Briefing the semester before the anticipated date of the Final Oral Examination.

• All requirements and deadlines must be met for successful completion of Final Oral Examination and Thesis deposit for graduation.

• Students must complete and submit form GS Form-8, *Request for Appointment of Examining Committee*, to the Graduate Program Coordinator in the BME Department at least four weeks prior to the anticipated Final Oral Examination date. The Purdue Graduate School requires that the date, time, and location of the Final Oral Examination be registered at least three weeks in advance of the oral examination.
• Thesis students must have initiated form GS Form-7, Report of Master's Examining Committee, and form GS Form-9, the Electronic Thesis Acceptance Form before their Oral Examination, to be completed by Advisory Committee members following their oral presentation. Consult with the BME Graduate Program Coordinator.

• Thesis students must adhere to the standards set forth in the Manual for the Preparation of Graduate Theses published by the Purdue Graduate School and available from the department Graduate Program Coordinator.

• It is incumbent upon the student to adhere to the requirements and guidelines stated in this manual. The Purdue Graduate School will not accept a Thesis that has improper or inappropriate formatting. In such cases, the Thesis will be returned to the student for revision before the Master of Science degree can be conferred.

• Students must purchase one set of Purdue Thesis black binder and submit a bound copy to their Thesis advisor, as well as the electronic thesis deposit (ETD) to the Purdue University Graduate School per deposit instructions.

• Students must check with their research advisors to determine whether their Thesis needs to be kept confidential. If confidentiality is required for your Thesis, form GS-15, Request for Confidentiality must be filed with the BME Graduate Program Coordinator upon completion of the Final Oral Examination.

• The student must personally meet with the Graduate Program Coordinator for verification of Thesis document format.

• The final, approved Thesis document for the Purdue Graduate School must be deposited at the IUPUI Graduate Office by the published semester deadline. More detailed instruction will be provided to graduating students during their final semester.

• Students should allow at least 2 days to complete all of the final revisions for Thesis formatting and administrative paperwork related to the Thesis deposit process. While all of this takes place after successful completion of the Oral Examination, a Master of Science degree cannot be conferred until the Thesis has been officially recorded with the Purdue University Graduate School.

• Non-Thesis students: are required to electronically submit GS Form-8 Request for Appointment of Examining Committee and GS Form-7 Report of the Examining Committee in their Purdue Career Account.

16. FINAL EXAMINATION COMMITTEE

The Final Examination Committee consists of at least three members. One member must be the Graduate Faculty Advisor. The others are appointed by the Faculty Advisor and most often consist of the members of the Graduate Research Advisory Committee. The Final Examination Committee evaluates the Thesis and conducts the Final Oral Examination. As a hedge against unanticipated problems with the Thesis research, each member of the
Committee should have a copy of the Thesis document at least one month prior to the final oral examination.

For those students enrolled in a project-based Non-Thesis Plan of Study, a similar but less formal committee must review oral presentation and final report of the capstone project (BME 69600 Advanced BME Projects). Those graduate students pursuing a course-only Non-Thesis Plan of Study may choose to make an oral presentation to same committee summarizing their final report from BME 69700 Directed Reading in BME.

17. SUMMARY OF THE MAJOR STEPS TOWARD OBTAINING A MASTER OF SCIENCE DEGREE IN BME

The following is an abbreviated list of the various steps which must be taken along the path toward a Master of Science Degree in Biomedical Engineering.

A. Before registering for classes each semester, report to your Faculty Advisor. If a Faculty Advisor has yet to be established, the student should report to the Director of the Biomedical Engineering Graduate Program.

B. Before registering for the first semester of classes, ensure what steps must be taken to fulfill any English language proficiency requirements if necessary.

C. Before the end of the first semester, establish a Faculty Advisor and inform the Director of the Biomedical Engineering Graduate Program. As soon as is practically possible, the student and Faculty Advisor should form a Graduate Research Advisory Committee.

D. No later than 4-6 weeks into the second semester of study, the student, working in conjunction with the Faculty Advisor and Advisory Committee, should file a Plan of Study with the Purdue University Graduate School. The Plan of Study Form (GS-6) is now done online via the Purdue Graduate School Portal website. Sample Plans of Study for Thesis and Non-Thesis degree programs are provided at the end of this document along with a few helpful instructions.

E. Ideally, steps C and D should be completed BEFORE the start of the second semester. Failure to do so means the second semester consists of course work that has not been reviewed and approved by the student's Graduate Advisory Committee.

F. If possible, all English language proficiency requirements should be completed by the end of the first semester of study. All English language proficiency requirements must be successfully completed no later than the end of the second semester of study. The Graduate School will not approve the Plan of Study nor the formal appointment of the Graduate Advisory Committee until all English language proficiency requirements have been fulfilled.

G. Submit any request for a change of Plan of Study to the Graduate School before classes begin in the semester you plan to graduate. The Plan of Study must be in its final form and received by the Graduate School before the first day of the last semester in order to be eligible for graduation.
H. Follow the steps outlined in Sections 15 and 16 for administrative processing of the Thesis document and preparing for the Final Oral Examination.
Appendix A. Guidelines for BME 697 and 696

Guidelines for BME 69700 Directed Reading

BME 697 is a reading course designed for students to gain background and up-to-date knowledge about a specific BME topic. The course is offered by individual faculty with expertise in the selected topic. Description of the individual sections of BME 697 will be posted through usual communication venues and students interested in the course should discuss with their Faculty Advisor prior to signing up for the course. The following guidelines are established to ensure the rigor of the course:

- The course instructor should submit a list of reading materials (research articles, review articles, book chapters, books, etc.) to the GEC no later than the first week after the semester starts.
- Course will be advertised on the BME Programs site. The announcement should include the topic of the reading course, schedule of meetings, and any expectation from the faculty instructor. Instructor permission is mandatory for students who are interested in registering for the course.
- Students should not register for more than 3 credit hours (1, 2, or 3) for the course.
- Unless approved by the Graduate Education Committee, BME 697 cannot be used as a Graduate Biomedical Engineering Course (Primary course) on the Plan of Study.
- At the end of the semester, students are required to submit a written report to the GEC summarizing the materials covered in the course. The level of expectation varies depending on the credit hours registered.
  - 1 cr: Submit a written report that summarizes the reading materials. The student should demonstrate Knowledge and Comprehension of the reading materials.
  - 2 cr: Submit a written report that summarizes the reading materials and a section of critical evaluation. The student should critically evaluate the reading assignments. The written report should start with a summary of the reading materials and finish with a section of critical evaluation on selected reading assignments. In addition to Knowledge and Comprehension, the student should demonstrate Application (the ability to apply knowledge) and Analysis (break down ideas into simple thoughts). Some examples of critical evaluation include commenting on the strengths and weaknesses of ideas proposed in the reading, or comparing and contrasting two or more methodologies.
  - 3 cr: Submit a written report that summarizes the reading materials. In addition to critical evaluation of the reading materials, students should also develop/identify a scientific/engineering problem within the realm of the topic. With assistance from the faculty instructor, the student should also offer potential engineering, analytical, or technical solutions to the problem. The written report should include all components described above. The student should demonstrate the Synthesis and Evaluation levels of comprehension as defined by Bloom’s Taxonomy.
- The instructor of record for the BME 697 section will be a regular faculty member. In cases where the Directed Reading sponsor (main instructor) is an adjunct faculty, non-BME faculty, or external sponsor, a regular BME faculty member will serve as the instructor of record to help guide the external main instructor adhere to the aim and spirit of the course and help in the assessment and assignment of the student's course grade.

Guidelines for BME 69700 Evaluations:
• **Report language**: The summary report should be written in scientific language with appropriate citations. Students are encouraged to seek professional assistance on the structure and writing of the report.

• **Report length**: The length of the report should be appropriate to the level (i.e., credit hour) of the effort.

• **Critical evaluation**: With the assistance from the instructor, students will be trained to develop original critical evaluation.

• **Problem solving**: Students are not required to propose original ideas and solutions for the scientific/engineering problems. However, based on the reading materials, they should provide logical evolution and correlation between the scientific/engineering problem and the potential solutions.

• **Grade recommendation**: The course grade for the student will be assigned by the instructor based upon the participation of the student in the regular meetings with the instructor and the quality of the report based upon the guidelines above. Reports will be submitted to the BME Graduate Committee at the end of the semester. The Graduate Committee will scan the report for plagiarism as well as assess the quality of the report and course grade assigned by the instructor against the course expectations and above guidelines. Feedback will be given to the instructor of record to ensure consistency of scoring and quality across BME 697 sections. Feedback, in particular to adjunct faculty, external sponsors, and junior faculty (< 3 years in the department) will play an important role in establishing consistency in the scoring of BME 697 across sections.

   Grades should be assessed in terms of degree of meeting expectations laid out per the number of course credit hours, above. The degree of meeting expectation, evidenced by the report, should be assessed against the following descriptors: A = Excellent, B = Very Good, C = Fair, D = Poor, F = Failure. Please note that graduate students are expected to maintain a cumulative B grade on courses on their Plan of Study to graduate from the program.

---

**Guidelines for BME 69600 Advanced Biomedical Engineering Projects**

BME 696 is a project-oriented course designed for students to gain hands-on experience in solving a specific BME problem, as well as to learn techniques in data processing, interpretation, and presentation. The course is offered by individual faculty with expertise in the selected BME topic. Description of the individual sections of BME 696 will be posted through usual communication venues, and students interested in the course should discuss with their Faculty Advisor prior to signing up for the course. If appropriate, before undertaking any BME 69600 Advanced BME Project the student should complete a comparable number of BME 69700 Directed Reading credits with the same Project Mentor. Doing so will ensure the student has sufficient knowledge of the Mentor’s research area to accomplish the project objectives as well as understand the technical significance of the work.

The following guidelines set expectations concerning course rigor and reporting:

- The course instructor should submit a summary of the project to the GEC at least one week before the semester starts.
- Instructor permission is mandatory for students who are interested in registering for the course.
- Students should not register for more than 3 credit hours (1, 2, or 3) for the course.
- Unless approved by the GEC, BME 696 **cannot** be used as a Graduate Biomedical Engineering Course (Primary course) on the Plan of Study.
At the end of the semester, students are required to make a 15-minute presentation to the GEC summarizing the work conducted in the project and submit a written report to the GEC summarizing the progress of the project. The level of expectation varies depending on the credit hours registered. If the project involves multiple researchers (e.g., undergraduate and graduate students, postdocs, research technicians, etc.), students should clearly and specifically describe their contribution to the project.

- **1 cr**: Submit a written report that summarizes the work assigned work performed. The student should demonstrate the background of the problem, the research techniques/tools used for the project, and the results obtained from the work along with a minimum of statistical analysis.

- **2 cr**: In addition to the instructions above, students should demonstrate their contributions to problem solving or trouble-shooting difficulties in the project (e.g., demonstration of prototyping and redesign as a result of testing and analysis).

- **3 cr**: In addition to the instructions above, students should also demonstrate the ability to design aspects of the experiments and/or protocols for the projects including statistical design of all testing protocols. The written report should also include recommendation for future directions.

The instructor of record for the BME 696 section will be a regular faculty member. In cases where the Advanced BME Project sponsor (main instructor) is an adjunct faculty, non-BME faculty, or external sponsor, a regular BME faculty member will serve as the instructor of record to help guide the external main instructor adhere to the aim and spirit of the course and help in the assessment and assignment of the student's course grade.

**Guidelines for BME 69600 Evaluations:**

- **Report language**: The summary report should be written in scientific language with appropriate citations. Students are encouraged to seek professional assistance on the structure and writing of the report.

- **Report length**: The length of the report should be appropriate to the level (i.e., credit hour) of the effort.

- **Critical evaluation**: With the assistance from the instructor, students will be trained to develop original critical evaluation.

- **Problem solving**: Students are not required to propose original ideas and solutions for the scientific/engineering problems. However, they should provide logical evolution and correlation between the scientific/engineering problem and the potential solutions.

- **Grade recommendation**: The course grade for the student will be assigned by the instructor based upon the participation of the student in the project and the quality of the report based upon the guidelines above. Reports will be submitted to the BME Graduate Committee at the end of the semester. The Graduate Committee will scan the report for plagiarism, and assess the quality of the report and course grade assigned by the instructor against the course expectations and the above guidelines. Feedback will be given to the instructor of record to ensure consistency of scoring and quality across BME 696 sections. Feedback, in particular to adjunct faculty, external sponsors, and junior faculty (< 3 years in the department) will play an important role in establishing consistency in the scoring of BME 696 across sections.

Grades should be assessed in terms of degree of meeting expectations laid out per the number of course credit hours, above. The degree of meeting expectation, evidenced by the report should be assessed against the following descriptors: A = Excellent, B = Very Good, C =
Fair, D = Poor, F = Failure. Please note that Graduate students are expected to maintain a cumulative B grade on courses on their Plan of Study to graduate from the program.
Appendix B. Help with Plan of Study (GS-6) for a Master of Science in BME

A few helpful suggestions include:

1. Mark (X) Thesis or Non-Thesis Option on the plan.

2. List a total of 7 courses and arrange the courses into two separate groups. Group courses in the Primary area first followed by the group of courses in the Related area. Consult with your advisor on the Primary and the related area courses. For each of the courses listed designate “P” for Primary and “R” for Related under the column for Area on the far left column. Do not include Master of Science Research Thesis credits.

3. For the column labeled "Date Completed or to be Completed", only the month and year is required. There is no need to include a specific date of completion.

4. For the column labeled "Regular Registration", a check indicates that this particular course was or will be completed after official admission to graduate program, i.e., courses taken following admission to the IUPUI Graduate School AND the graduate program in BME.

5. For the column labeled "Non-degree Regis", a check indicates that this particular IUPUI course was completed as a non-degree graduate student BEFORE being admitted into the BME program.

6. The column labeled "Other or Transfer From" refers to those courses taken at another institution that are to be transferred to the Plan of Study. The name of the institution (other than IUPUI) which offered the courses must be recorded. This is required for Purdue graduate courses taken at a campus other than IUPUI as well as all online course offerings from Purdue (e.g., via the Engineering Professional Education online program) and requires prior approval from the student's Advisory Committee. In addition, had the student started a Master of Science degree program in a department at IUPUI other than BME (e.g., Biology) and decided to switch to BME, the course(s) completed in the Biology department would also be considered transfer courses and must be indicated as such in the “Other or Transfer From” column. Similarly, this also applies to graduate courses taken as an undergraduate, that are not applied to any undergraduate degree program.

With respect to item #6: Reminder that it is a rule for all Master of Science degree programs in the Purdue system that no more than 12 graduate credit hours can be transferred onto a Plan of Study from an outside institution or some other IUPUI graduate degree program (for example, Biology in the example above).
